School of Communications and Journalism
Universidad Adolfo Ibáñez*

Motivation: High school students' prominent role in Chilean politics

	Participation in demonstrations after 18 October 2019 (%)			
Participation in demonstrations before 18 October 2019 (%)	No	Yes, once	Yes, several times	Total
No	56.5	8.3	2.7	67.6
Yes, once	9.0	8.0	3.2	20.2
Yes, several times	1.8	2.5	7.9	12.2
Total	67.3	18.9	13.9	100.0

Our research question

Video-malaise

- (1) Exposure to the news media could turn off citizens: foster mistrust of government, dissatisfaction with regime institutions, and thus civic disengagement (e.g. Patterson 1993);
- (2) TV entertainment saps social trust and associational activism (e.g. Putnam 2000).

Virtuous circle

- (1) Prior political interest and knowledge stimulates exposure and attention to news (Norris 2000);
- (2) exposure and attention to news strengthens political activism (Norris 2000).

Research question: Do new digital platforms foster civic engagement and political activism among high-school students in Chile?

Our survey

ESCUELA DE
COMUNICACIONES
Y PERIODISMO

Universe: High school students, **between ninth and eleventh grade**, from all socioeconomic backgrounds, living in the urban areas of Santiago and the Valparaíso-Viña del Mar conurbation.

Sampling frame: Students, **between ninth and eleventh grade**, from schools with 75+ students across the three levels. Schools: 742; Students: 150,057. Source: 2020 Registry of Enrollments and Schools, Ministry of Education.

Sampling method: Respondents were selected by a stratified, probability sampling with oversampling of schools.

Mode of interview: CAWI.

Fieldwork: April to September 2021.

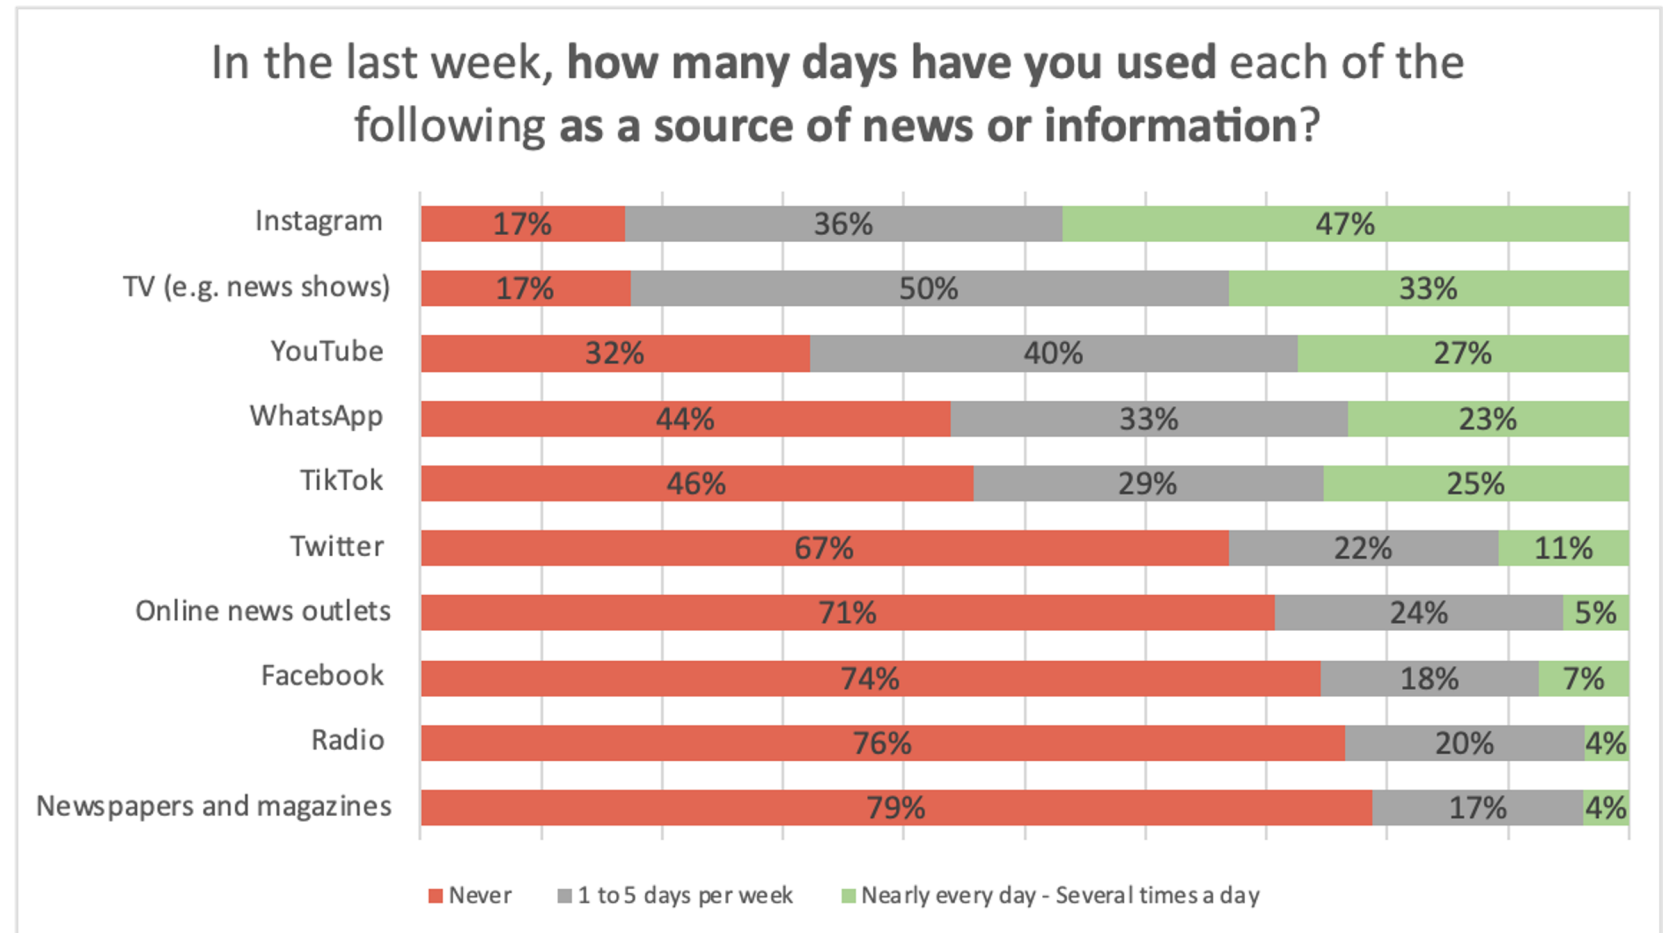

Resulting sample: Schools: 29; Students: 2,684.

Response Rate: 11%

Consents: active for schools' principals; passive for students' parents.

Frequency of news consumption across media outlets and digital platforms

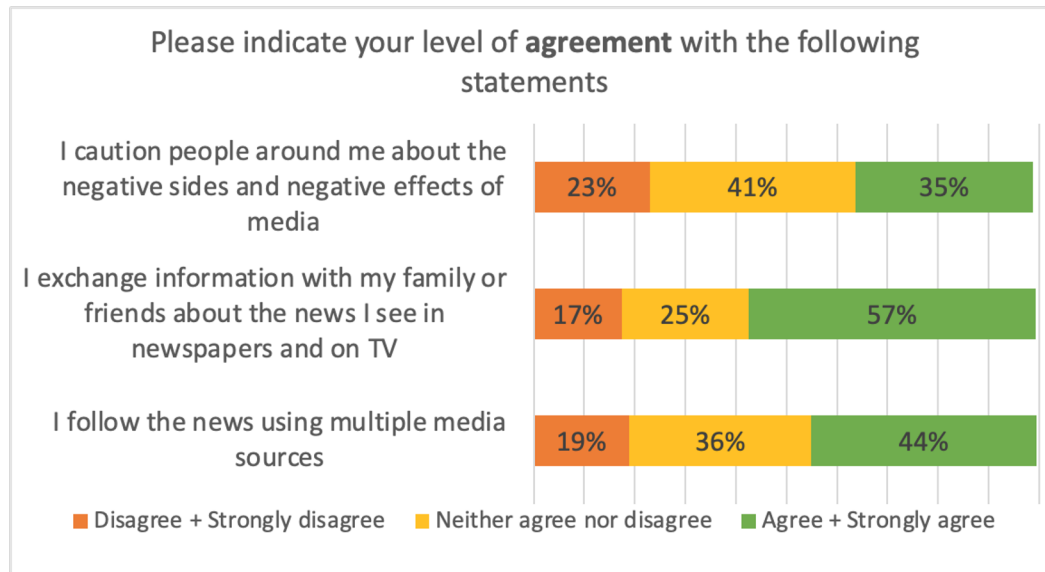

- **Instagram** is the most frequently used source overall
- **TV** is the most common of traditional media sources
- Most traditional media are among the least used: **radio, print media**
- **Facebook** is the least used social network

Other independent variables: literacy and trust

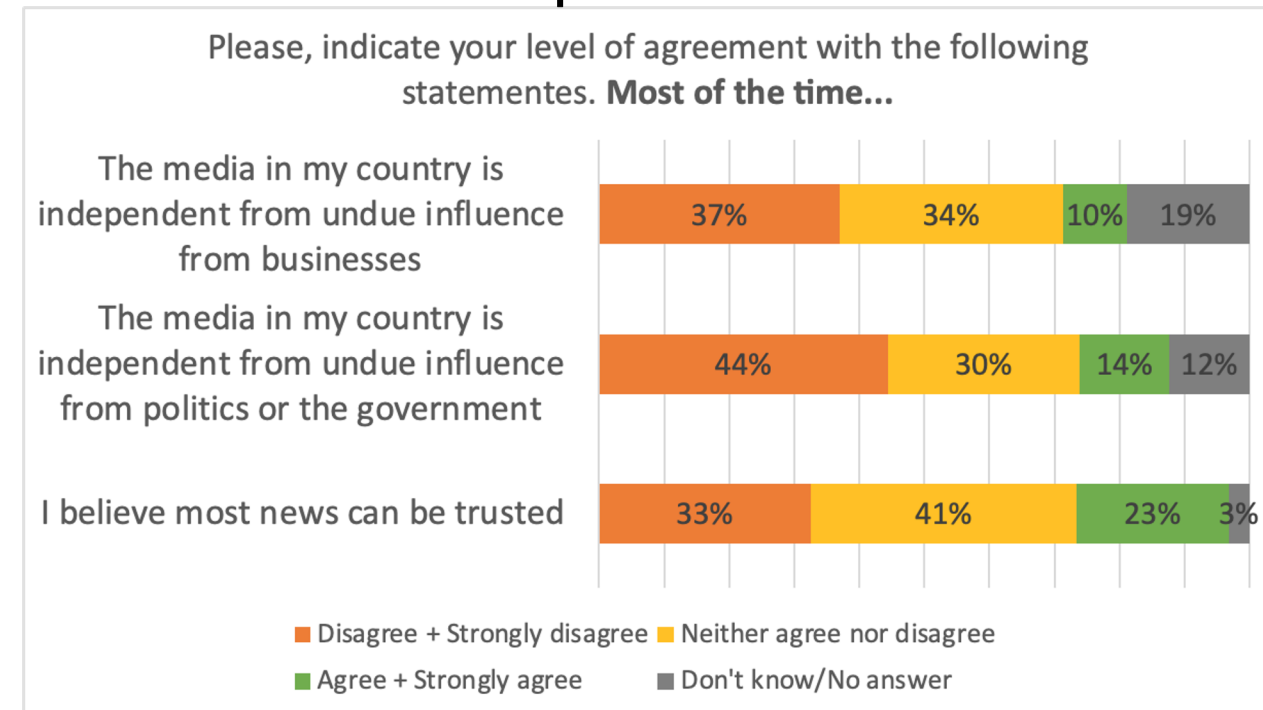

News literacy

- Construct from Jones-Jang et al. 2021
- Cronbach's alpha: 0.68

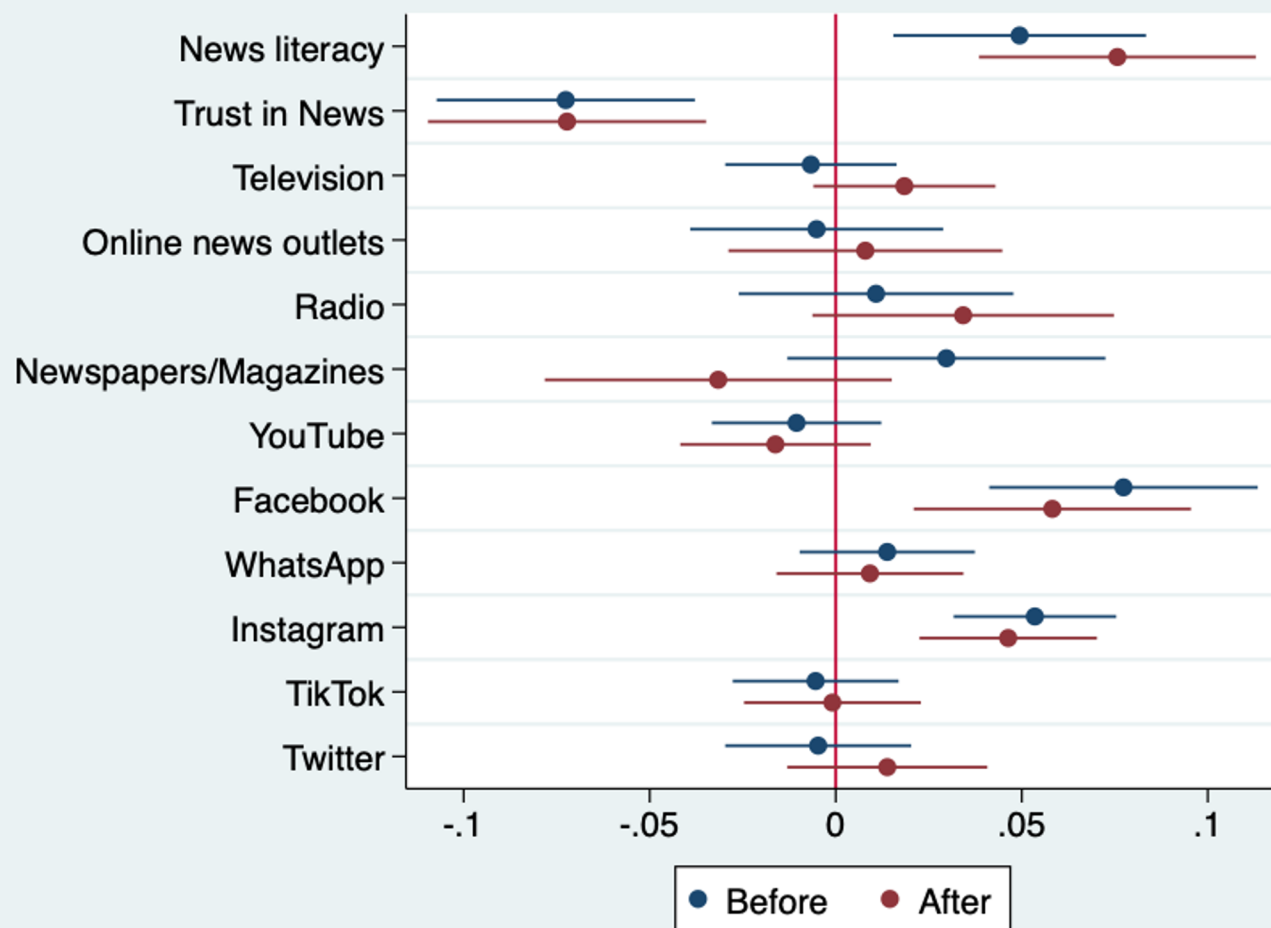

Trust in news

- Construct from Lee et al. 2019
- Cronbach's alpha: 0.69

Participating in demonstrations before and after 18 Oct 2019

Dependent variables:
frequency of participation.

Linear models using robust standard errors.

→ Results are similar using linear multilevel models.

Controls: sex, grade level, socioeconomic status (SES), region, type of school.

Forms of online political engagement

UAI
UNIVERSIDAD ADOLFO IBÁÑEZ

Dependent variables:

In the last 12 months, have you engaged in any of the following activities? (% "Yes")

Expressing your opinion about a topic of public interest through social media

36%

Joining political, community, or citizen causes in social networks

12%

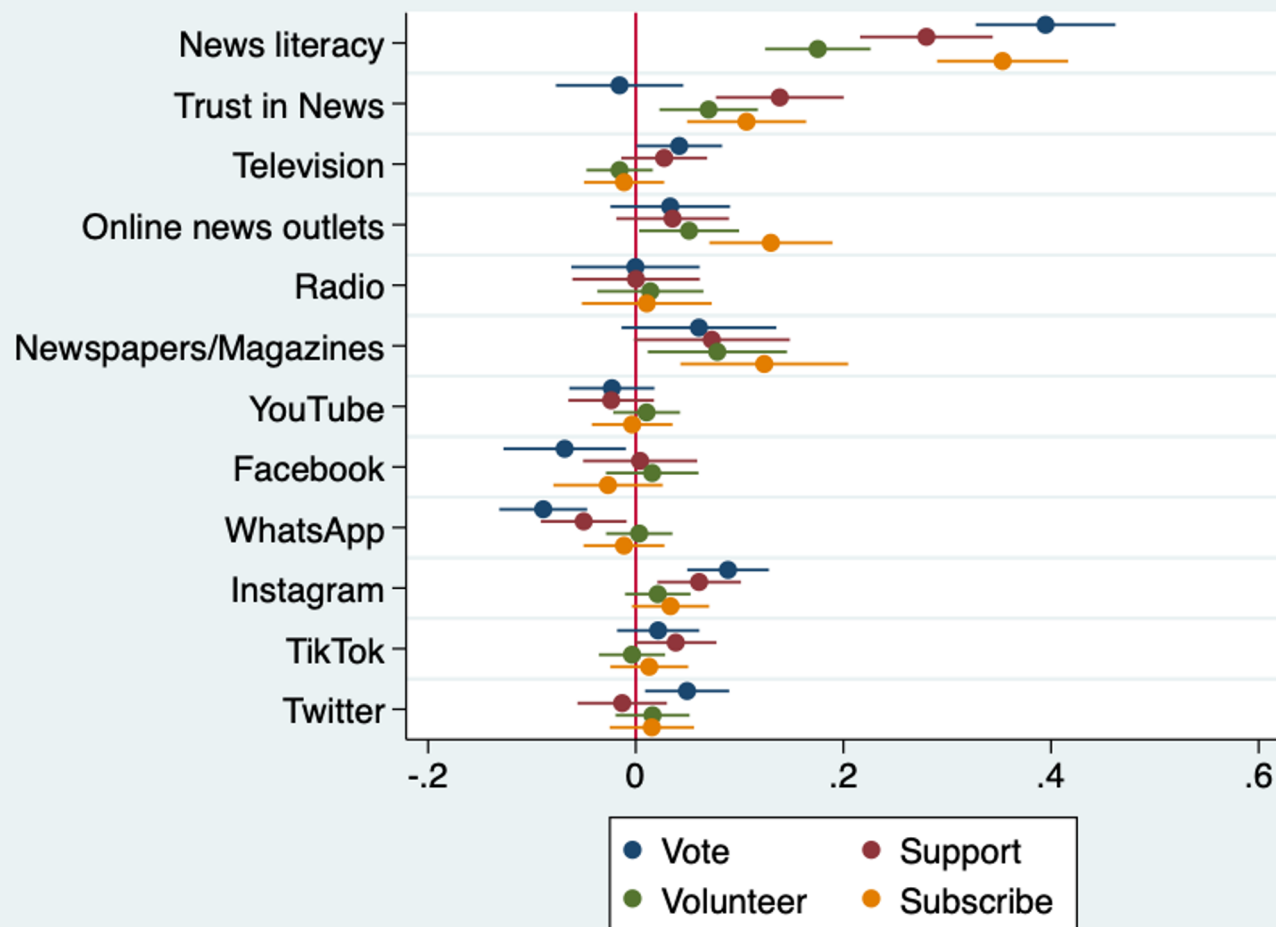

Participating in boycotts or rejections through social networks

7%

Linear models using robust standard errors.

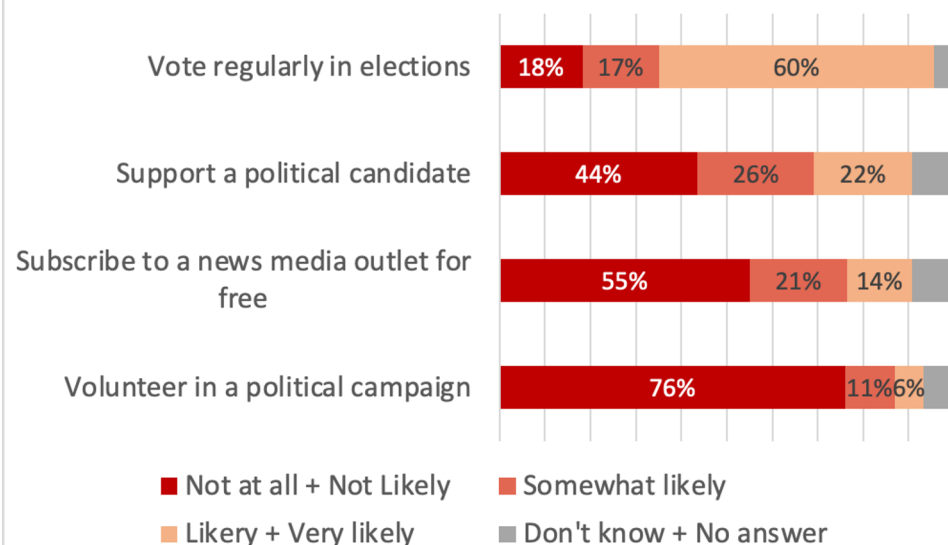

- Same control variables.
- Results are similar using linear multilevel models.

Future political behaviors

Dependent variables:

When you are over 18, how likely are you to participate in the following activities?

Linear models using robust standard errors.

→ Same control variables.

→ Results are similar using linear multilevel models.

González, Salvatierra & Browne (LEAS UAI)

Preliminary conclusions

Is it video-malaise or virtuous cycle among high-school students in Chile?
It depends.

Behavior	Video-malaise	Virtuous cycle
Past participation in demonstrations		 
Expressing opinions online		   
Joining online causes		 
Boycotting on social networks		 
Voting in elections (future)	 	 
Supporting a political candidate (future)		

Many thanks!
